PAPERBOARD PACKAGING SOLUTIONS

BETTER IDEAS | **DRIVEN BY QUALITY**
delivers:

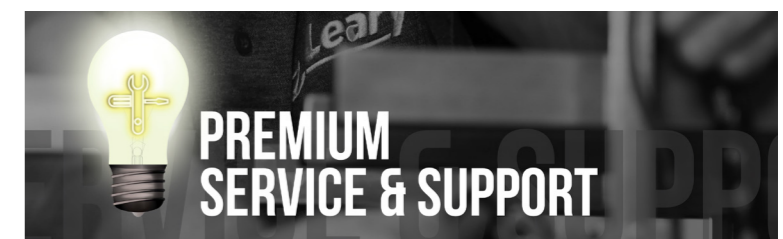

Customizable end-to-end systems. Leary's patented, innovative technologies are at the forefront of the paperboard packaging market, offering the most expansive range of gluing, quality assurance, and data collection solutions.

Reduce human interaction. Utilizing automation technology to improve adhesive application and quality control deliver significant improvement in production, quality, and waste reduction.

Reduce board and glue waste. Running your plant at the highest level of productivity is sustainable when you decrease product waste, improve production processes, and maximize your hardware assets.

Remote access to minimize downtime. Troubleshooting and software upgrades through remote access is a must, and standard with all new Monet controllers. Leary puts customers first by offering premium service and support in all areas.

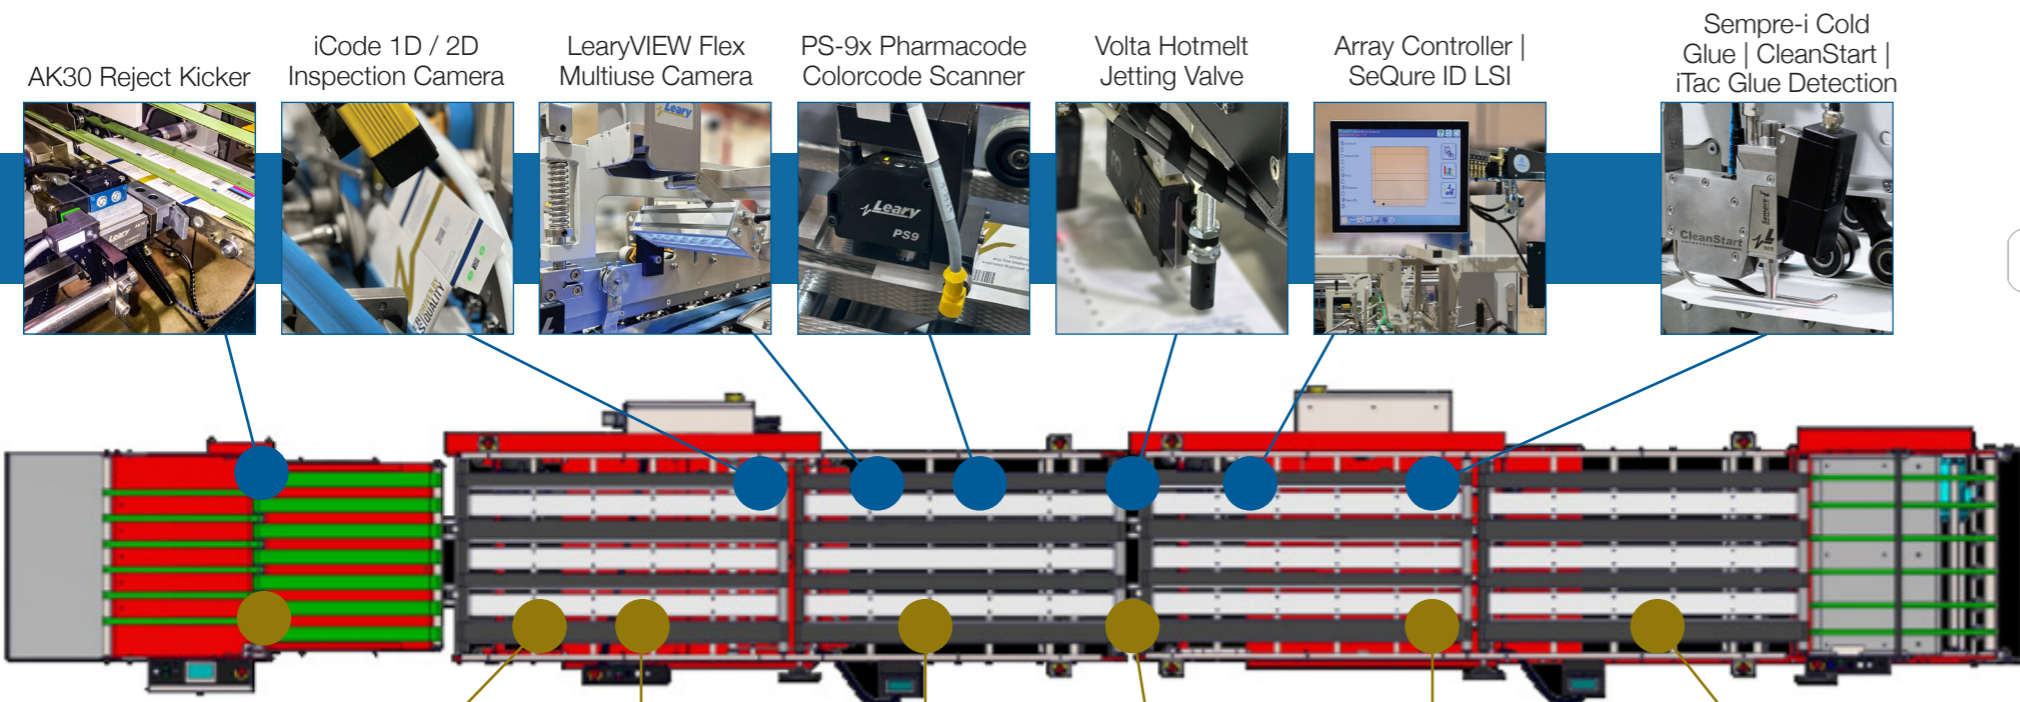

Leary brings Better Ideas Driven by Quality to a packaging world where products, ideas, and technologies are rapidly evolving. Trust Leary to deliver the better, customizable, end-to-end system.

Our Gluing, Quality Assurance and Data solutions save time, reduce board and glue waste, and use automation to reduce human interaction where unnecessary – all while guaranteeing quality product, every time. Leary's solutions transform the common challenge of hiring the right people into an opportunity to improve both efficiency and throughput with cutting-edge products and technology.

Leary's patented, fail-safe solutions guarantee every product is inspected by each detection station on the machine. Reliable rejection devices ensure that defective products are safely removed from the production line automatically, without interrupting the machine or reducing productivity.

All Leary systems can be equipped with iQ Smart Services technology. This secure Cloud-based solution provides remote access for immediate technical support, collects real-time data from the factory floor to power large production display screens and offers alerts by email or SMS as well as in-depth reports for root cause analysis and continuous improvement.
